

## A2 - Das ggmap Paket

Jan-Philipp Kolb

22 Oktober 2018

# Inhalt dieses Abschnitts

Arten von räumlichen Daten:

- **Straßenkarten**
- **Satelliten Bilder**
- **Physische Daten und Karten**
- **Abstrakte Karten**
- ...

Das R-paket `ggmap` wird im folgenden genutzt um verschiedene Kartentypen darzustellen.

Mit `qmap` kann man eine schnelle Karte erzeugen.

# Installieren des Paketes

- Zur Erstellung der Karten brauchen wir das Paket ggmap:

```
devtools::install_github("dkahle/ggmap")
devtools::install_github("hadley/ggplot2")
install.packages("ggmap")
```

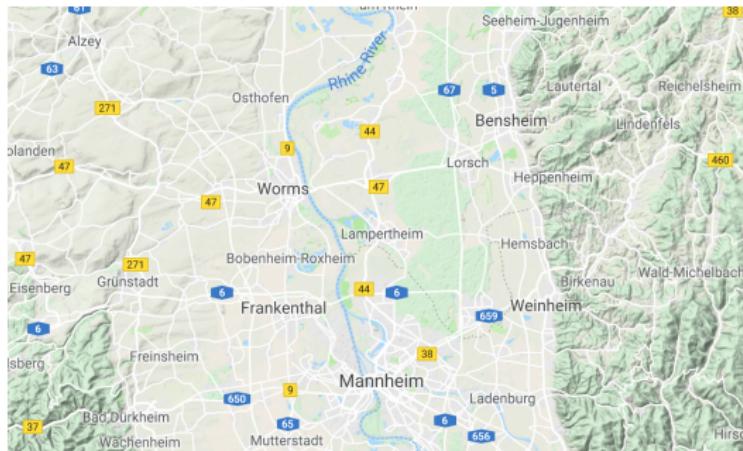

# Paket ggmap - Hallo Welt

- Um das Paket zu laden verwenden wir den Befehl library

```
library(ggmap)
```

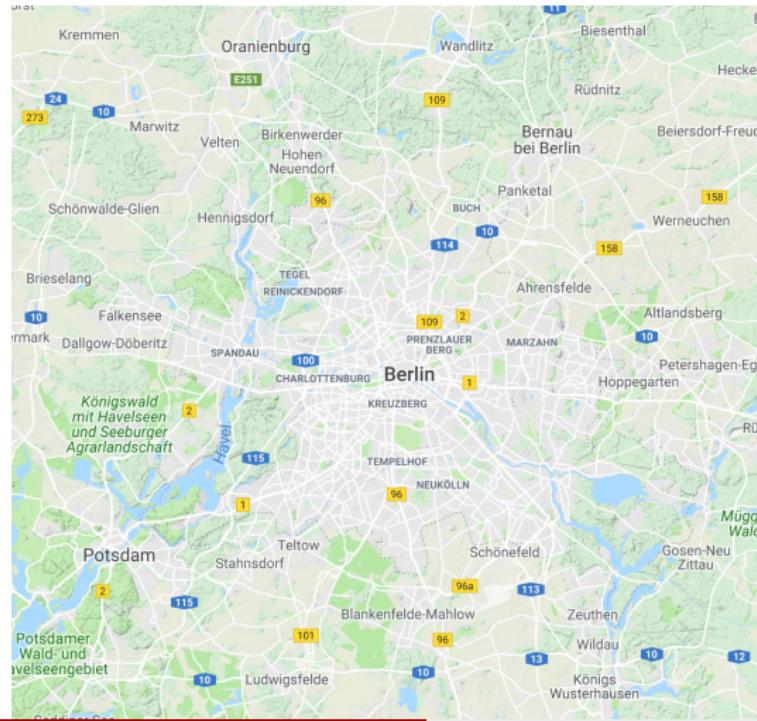

Und schon kann die erste Karte erstellt werden:

```
qmap("Mannheim")
```

# Karte für eine Sehenswürdigkeit

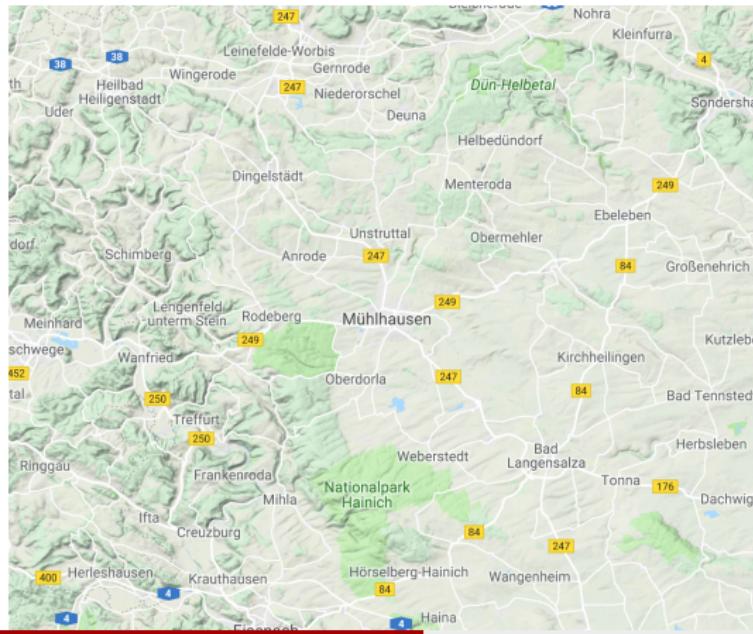

```
qmap("Berlin Brandenburger Tor")
```

# Karte für einen ganzen Staat

```
qmap("Germany")
```

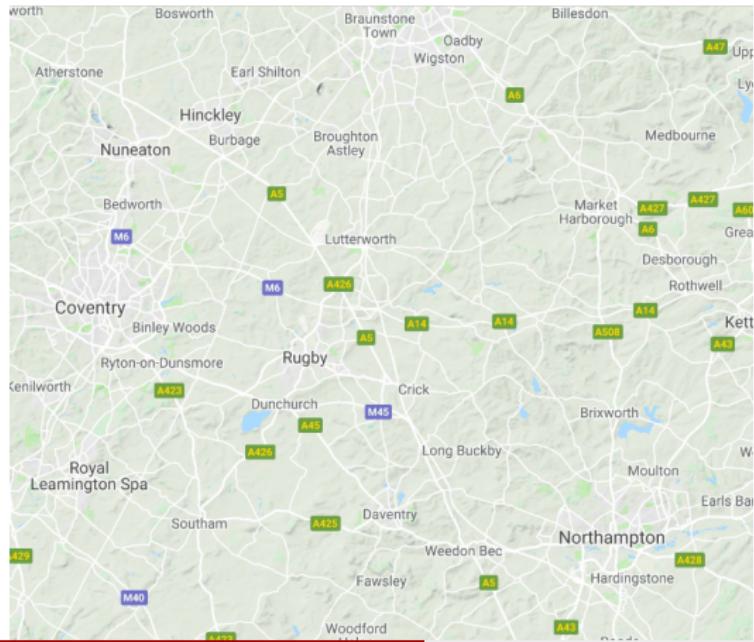

- Wir brauchen ein anderes *zoom level*

# Ein anderes *zoom level*

- level 3 - Kontinent / level 10 - Stadt / level 21 - Gebäude

```
qmap("England", zoom = 6)
```

# Hilfe bekommen wir mit dem Fragezeichen

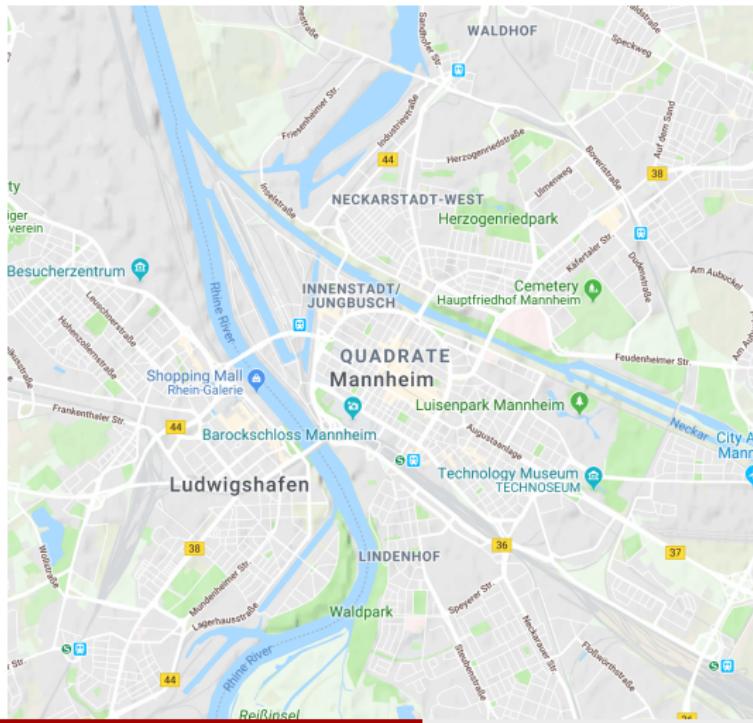

?qmap

Verschiedene Abschnitte in der Hilfe:

- Description
- Usage
- Arguments
- Value
- Author(s)
- See Also
- Examples

# Ganz nah dran

```
qmap('Mannheim', zoom = 20)
```

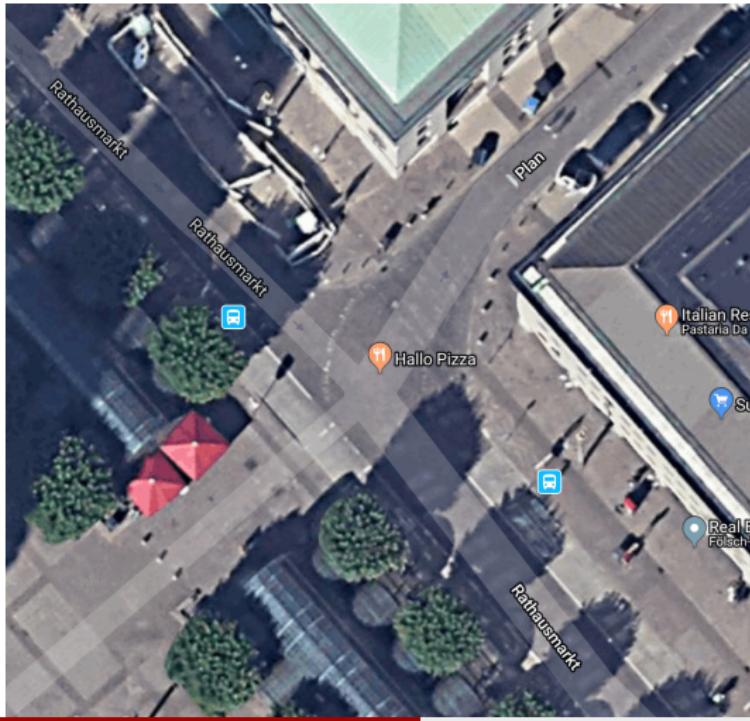

## ggmap - maptype satellite

```
qmap('Hamburg', zoom = 14, maptype="satellite")
```

# ggmap - maptype satellite zoom 20

```
qmap('Hamburg', zoom = 20, maptype="hybrid")
```

# Terrain/physical maps

- Aus Physischen Karten kann man Informationen über Berge, Flüsse und Seen ablesen.
- Farben werden oft genutzt um Höhenunterschiede zu visualisieren

```
qmap('Arequipa', maptype="terrain")
```

# Eine physische Karte von Arequipa

# Abstrahierte Karten (<http://www.designfaves.com>)

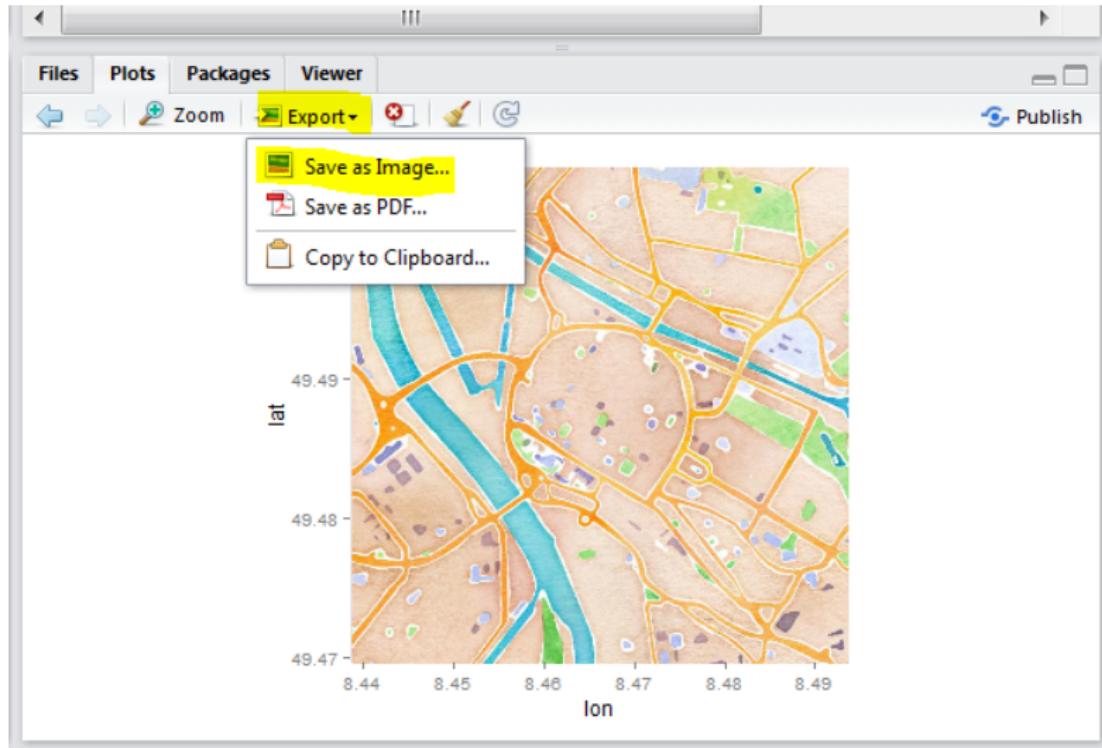

- Abstraktion wird genutzt um nur die essentiellen Informationen einer Karte zu zeigen.
- Bsp. U-Bahn Karten - wichtig sind Richtungen und wenig Infos zur Orientierung

# ggmap - maptype watercolor

```
qmap('Los Angeles', zoom = 14,  
      maptype="watercolor",source="stamen")
```

# Graphiken speichern

# ggmap - ein Objekt erzeugen

- <- ist der Zuweisungspfeil um ein Objekt zu erzeugen
- Dieses Vorgehen macht bspw. Sinn, wenn mehrere Karten nebeneinander gebraucht werden.

```
MA_map <- qmap('Mannheim',
                 zoom = 14,
                 maptype="toner",
                 source="stamen")
```

# Eine Karte für die USA

- Mit dem Befehl `OSM_scale_lookup` bekommt man heraus, welchen Wert man für `scale` angeben muss.

```
OSM_scale_lookup(zoom = 10)
qmap(location = "Trier", zoom = 10, source = "osm",
      scale=575000)
```

### Data Visualization with ggplot2

Cheat Sheet

#### Basics

ggplot2 is based on the **grammar of graphics**, the idea that you can build even the most complex plots from the same few components: a **data set**, a set of **geom**s—visual marks that represent data points, and a **coordinate system**.

#### Geoms

Use a geom to represent data points, use the geom's aesthetic properties to represent variables. Each function returns a layer.

##### One Variable

###### Continuous

a <- ggplot(mpg, aes(hwy))

b <- geom\_freqpoly()

c <- geom\_dotplot()

d <- geom\_hex()

e <- geom\_rect()

f <- geom\_text()

g <- geom\_label()

##### Two Variables

###### Continuous X, Continuous Y

f <- ggplot(mpg, aes(wt, hwy))

g <- geom\_jitter()

h <- geom\_point()

i <- geom\_quantile()

j <- geom\_rug()

k <- geom\_smooth()

l <- geom\_text(aes(label = mpg))

##### Continuous Bivariate Distribution

Continuous X, Continuous Y

m <- ggplot(mtcars, aes(wt, mpg))

n <- geom\_hex()

o <- geom\_hex(stat = "density")

p <- geom\_hex(stat = "count")

q <- geom\_hex(stat = "mean")

r <- geom\_hex(stat = "median")

s <- geom\_hex(stat = "sum")

##### Continuous Function

t <- ggplot(economics, aes(date, unemploy))

u <- geom\_area()

v <- geom\_line()

w <- geom\_step(direction = "inward")

x <- geom\_pointrange()

y <- geom\_shape()

##### Visualizing error

of <- data.frame(rnorm(100), rnorm(100), n = 10)

k <- ggplot(of, aes(x, y, n = n))

l <- geom\_crossbar()

m <- geom\_errorbar()

##### Maps

data <- diamonds

state <- us.states

map <- state %>% st\_as\_sf()

map <- map %>% st\_set\_crs(4326)

ggplot(data, aes(x = x, y = y))

+ geom\_sf()

+ geom\_sf\_size(mapping = map %>% select(-id))

+ expand\_limits(x = map\$x, y = map\$y)

map <- map %>% st\_sf()

+ geom\_sf()

+ geom\_sf\_size(mapping = map %>% select(-id))

+ expand\_limits(x = map\$x, y = map\$y)

map <- map %>% st\_sf()

+ geom\_sf()

+ geom\_sf\_size(mapping = map %>% select(-id))

+ expand\_limits(x = map\$x, y = map\$y)

map <- map %>% st\_sf()

+ geom\_sf()

+ geom\_sf\_size(mapping = map %>% select(-id))

+ expand\_limits(x = map\$x, y = map\$y)

##### Three Variables

analysis <- mtcars %>% mutate(delta\_wt = 2 \* delta\_wt / 2)

m <- ggplot(analysis, aes(wt, mpg))

+ geom\_hex()

+ geom\_hex(stat = "raster")

+ theme\_minimal()

+ scale\_alpha\_continuous(range = c(0.1, 1))

+ scale\_fill\_hex(hex = "#E69138")

+ scale\_color\_hex(hex = "#E69138")

+ scale\_size\_hex(hex = "#E69138")

+ scale\_stroke\_hex(hex = "#E69138")

+ scale\_fill\_hex(hex = "#E69138")

+ scale\_color\_hex(hex = "#E69138")

+ scale\_size\_hex(hex = "#E69138")

+ scale\_stroke\_hex(hex = "#E69138")

+ scale\_fill\_hex(hex = "#E69138")

+ scale\_color\_hex(hex = "#E69138")

+ scale\_size\_hex(hex = "#E69138")

+ scale\_stroke\_hex(hex = "#E69138")

+ scale\_fill\_hex(hex = "#E69138")

+ scale\_color\_hex(hex = "#E69138")

+ scale\_size\_hex(hex = "#E69138")

+ scale\_stroke\_hex(hex = "#E69138")

+ scale\_fill\_hex(hex = "#E69138")

+ scale\_color\_hex(hex = "#E69138")

+ scale\_size\_hex(hex = "#E69138")

+ scale\_stroke\_hex(hex = "#E69138")

+ scale\_fill\_hex(hex = "#E69138")

+ scale\_color\_hex(hex = "#E69138")

+ scale\_size\_hex(hex = "#E69138")

+ scale\_stroke\_hex(hex = "#E69138")

+ scale\_fill\_hex(hex = "#E69138")

+ scale\_color\_hex(hex = "#E69138")

+ scale\_size\_hex(hex = "#E69138")

+ scale\_stroke\_hex(hex = "#E69138")

+ scale\_fill\_hex(hex = "#E69138")

+ scale\_color\_hex(hex = "#E69138")

+ scale\_size\_hex(hex = "#E69138")

+ scale\_stroke\_hex(hex = "#E69138")

+ scale\_fill\_hex(hex = "#E69138")

+ scale\_color\_hex(hex = "#E69138")

+ scale\_size\_hex(hex = "#E69138")

+ scale\_stroke\_hex(hex = "#E69138")

+ scale\_fill\_hex(hex = "#E69138")

+ scale\_color\_hex(hex = "#E69138")

+ scale\_size\_hex(hex = "#E69138")

+ scale\_stroke\_hex(hex = "#E69138")

+ scale\_fill\_hex(hex = "#E69138")

+ scale\_color\_hex(hex = "#E69138")

+ scale\_size\_hex(hex = "#E69138")

+ scale\_stroke\_hex(hex = "#E69138")

+ scale\_fill\_hex(hex = "#E69138")

+ scale\_color\_hex(hex = "#E69138")

+ scale\_size\_hex(hex = "#E69138")

+ scale\_stroke\_hex(hex = "#E69138")

+ scale\_fill\_hex(hex = "#E69138")

+ scale\_color\_hex(hex = "#E69138")

+ scale\_size\_hex(hex = "#E69138")

+ scale\_stroke\_hex(hex = "#E69138")

+ scale\_fill\_hex(hex = "#E69138")

+ scale\_color\_hex(hex = "#E69138")

+ scale\_size\_hex(hex = "#E69138")

+ scale\_stroke\_hex(hex = "#E69138")

+ scale\_fill\_hex(hex = "#E69138")

+ scale\_color\_hex(hex = "#E69138")

+ scale\_size\_hex(hex = "#E69138")

+ scale\_stroke\_hex(hex = "#E69138")

+ scale\_fill\_hex(hex = "#E69138")

+ scale\_color\_hex(hex = "#E69138")

+ scale\_size\_hex(hex = "#E69138")

+ scale\_stroke\_hex(hex = "#E69138")

+ scale\_fill\_hex(hex = "#E69138")

+ scale\_color\_hex(hex = "#E69138")

+ scale\_size\_hex(hex = "#E69138")

+ scale\_stroke\_hex(hex = "#E69138")

+ scale\_fill\_hex(hex = "#E69138")

+ scale\_color\_hex(hex = "#E69138")
